

Are mobile phones good for society?

Find out and join in our controversial conversation

This picture shows that persons of this generation rather would be on their phones than socially interact with other humans.

Today's society is quite dependent on their phones forgetting about other struggles in their lives at times. Having phones in the current time is both advantageous and disadvantageous. One advantage of having a mobile phone is that they help quite a lot with organizing busy schedules, mobile phones are good organizers, and their schedules are a perfect way to keep track of a packed schedule. Or that phones help with communication between family or friends no matter how long the distance, mobile phones provide direct communication with friends, families, colleagues, and indeed the large proportion of the world's population. And lastly for the advantageous reasons,

By Ami Patel

mobile phones allow you to pass the time, you can download and play a variety of games, read an online post, or engage in social media. Smartphones encourage users to watch videos as well as listen to music, podcasts, and radio. Plus, if you're going to a live concert, you can usually save your ticket on your phone and show it at the entrance. Now this is a balanced argument so... Disruption can occur in a variety of ways. For example, a phone rings during a musical or theatre play, someone spends a dinner party texting rather than having a conversation with the other participants, or a family gathering is interrupted by a work-related call. Mobile phones have the ability to pollute the mood at activities and undermine social gatherings. It is not inexpensive to purchase, use, and maintain an up-to-date cell phone model. The issue is that, as technology advances, handset models become obsolete relatively rapidly, necessitating an update. Then there's the data and other things you'll have to pay for. It is not inexpensive to purchase, use, and maintain an up-to-date cell phone model. The issue is that, as technology advances, handset models become obsolete relatively rapidly, necessitating an update.

This picture shows how humans cannot concentrate on a certain activity such as going on runs, running errands etc.

"I thought the invention of the mobile phone was to save our time & money, so we are doing exactly the opposite."

— Srinivas Shenoy
